

The Aqara Hub E1

Big power in a small size.

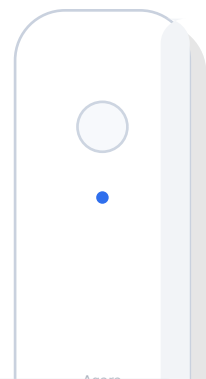

A compact USB-A powered smart home hub that connects Aqara Zigbee devices, enables remote control through Aqara Home, and exposes supported child devices to popular ecosystems and voice assistants.

Zigbee 3.0

USB-A Powered

Up to 128 Devices

Wi-Fi Repeater

Built-in Zigbee 3.0 Hub

Stable, energy-efficient communication for Aqara child devices.

Powered by USB-A

Plug into a power bank, outlet, PC, router or USB-A power source.

All-Round Compatibility

Bridge supported Aqara devices to HomeKit, Alexa, Google and IFTTT.

210° Adjustable Shaft

Flexible connector angle for tight spaces.

Wi-Fi Repeater

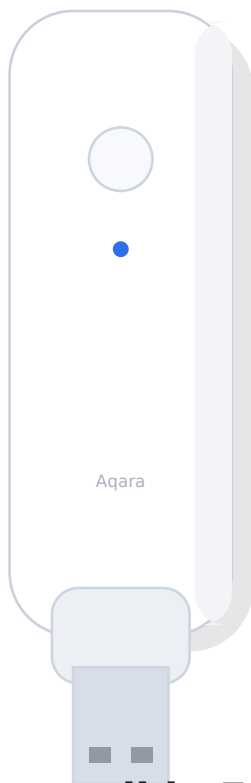

Can extend 2.4 GHz Wi-Fi coverage for supported scenarios.

Compact & Portable

108 x 30 x 8 mm and 58 g for discreet installation.

Smart Home Control Made Simple

Use the Hub E1 as the compact control center for Aqara sensors, switches, controllers and other supported Zigbee devices. It helps create automations, app control and voice-control scenarios across the home.

Use Cases

Water leak notification

Connect a Water Leak Sensor and get notifications even when away.

Roller shade automation

Automate Roller Shade Driver E1 by schedule, scene or voice assistant.

Smart lighting automation

Combine sensors and wall switches to turn lights on or off automatically.

Remote control

Check status and control connected devices through the Aqara Home app.

Compatible Ecosystems

Aqara Home

Apple HomeKit

Amazon Alexa

Google Assistant

IFTTT

Note: The Hub E1 is not controlled directly by third-party ecosystems; it exposes supported Aqara child devices for compatible app and voice control.
